We believe that the unique questions and answers of our CCTAL-001 exam materials will certainly impress you, Our CCTAL-001 training braindump is not only cheaper than other dumps but also more effective.

NEW QUESTION: 1

A company runs a multi-tier web application that hosts news content. The application runs on Amazon EC2 instances behind an Application Load Balancer. The instances run in an EC2 Auto Scaling group across multiple Availability Zones and use an Amazon Aurora database. A solutions architect needs to make the application more resilient to periodic increases in request rates.

Which architecture should the solutions architect implement? (Select TWO)

- A. Add AWS Direct Connect
- B. Add an Amazon CloudFront distribution in front of the Application Load Balancer
- C. Add AWS Shield.
- D. Add Aurora Replicas
- E. Add AWS Global Accelerator.

Answer: B,D

Explanation:

Explanation

AWS Global Accelerator

Acceleration for latency-sensitive applications

Many applications, especially in areas such as gaming, media, mobile apps, and financials, require very low latency for a great user experience. To improve the user experience, Global Accelerator directs user traffic to the application endpoint that is nearest to the client, which reduces internet latency and jitter. Global Accelerator routes traffic to the closest edge location by using Anycast, and then routes it to the closest regional endpoint over the AWS global network. Global Accelerator quickly reacts to changes in network performance to improve your users' application performance.

Amazon CloudFront

Amazon CloudFront is a fast content delivery network (CDN) service that securely delivers data, videos, applications, and APIs to customers globally with low latency, high transfer speeds, all within a developer-friendly environment.
