NEW QUESTION: 2
ドラッグドロップ

Answer:
Explanation:

NEW QUESTION: 3
A company has an on-premises Microsoft SQL Server environment and Microsoft Azure SQL Database instances. The environments host several customer databases.
You configure an Always On Availability Group for a customer. You must create log reports for the customer that detail when the log is flushed to disk on the primary and secondary replica.
You need to develop a report containing the requested information.
In the table below, identify the log type that you should use for each replica.

NOTE: Make only one selection in each column. Each correct selection is worth one point.

Answer:
Explanation:

Explanation

Flush on primary: Log flush
Log flush. Log data is generated and flushed to disk on the primary replica in preparation for replication to the secondary replica. It then enters the send queue.
Flush on secondary: Log hardened
The log is flushed on the secondary replica, and then a notification is sent to the primary replica to acknowledge completion of the transaction.

NEW QUESTION: 4
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a hybrid deployment of Microsoft 365 that contains the objects shown in the following table.
