Which two statements about the EEM applet configuration are true? (Choose two.)

- A. The EEM applet runs after the CLI command is executed
- B. The EEM applet requires a case-insensitive response
- C. The EEM applet runs before the CLI command is executed
- D. The running configuration is displayed only if the letter Y is entered at the CLI

Answer: C,D

Explanation:

When you use the sync yes option in the event cli command, the EEM applet runs before the CLI command is executed. The EEM applet should set the `_exit_status` variable to indicate whether the CLI command should be executed (`_exit_status` set to one) or not (`_exit_status` set to zero). With the sync no option, the EEM applet is executed in background in parallel with the CLI command.
