NEW QUESTION: 1

You have a Dynamics 365 for Customer Service tenant that has one Sandbox instance and multiple Production instances.

You need to import changes from the Sandbox instance to each of the Production instances with different requirements.

Which types of solutions should you use? To answer, drag the appropriate solution types to the correct requirements. Each solution type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Topic 1, Case Study Lamna

Case Study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other question on this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin

a new section, you cannot return to this section.

To start the case study

To display the first question on this case study, click the button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the button to return to the question.

Background

Current processes

Dynamics 365

Lamna has been using Dynamics 365 and Microsoft Office 365 for three years. Access to Dynamics 365 is limited to childcare workers. Support staff only have access to Office 365 applications.

There is a high turnover rate among childcare workers, so there is often a rush to hire replacements. Childcare workers are often hired on weekends and start work the following Monday.

The administrator maintains a list of apps that are approved for use and makes the list available to all Dynamics 365 users.

Child registration

When a parent registers a child, workers collect information such as known allergies, emergency contact information, list of medications, and scans of signed consent forms for the child. Additional information is collected through the year including field trip consent forms and an annual feedback.

Intake

Every day an employee records each child's arrival time, departure time, and the name of the person who picked up the child in an attendance log. Each record includes a field to enter emergency contact information for the child. This field often remains blank since the childcare worker is too busy to populate this information.

Attendance records are created from a child record. The supervisor reviews an attendance log at the end of day for each team of workers.

Reports

Reports are created from Microsoft Word templates for the healthcare workers and documents are stored in Microsoft SharePoint.

You create a Child Attendance report and complete testing of the report in a sandbox environment. The report is ready for deployment to the production environment.

Requirements

Attendance

The child attendance log must be accessible by all staff members. A Child Attendance report is also required, as this information is often accessed at the parent's request. All fields for collecting additional information must be hidden by default.

In order to make the process of recording attendance information more efficient, workers must create an attendance record for each child and add the child to the record.

If a child is not picked up by 6:00pm, a text message must be sent to the parents notifying them of additional charges for late pickup. Microsoft Flow is used to deliver text messages to parents about additional charges for late pickup.

Medication

Complex information such as medications must be contained in a sub-grid on the child's record.

When children change age groups, all of their records must be available to the new team of childcare workers.

A child's medication record must no longer be viewable by the previous group of childcare workers.

System customization

All customization and testing are performed in the sandbox environment and then moved to production. To simplify management of Dynamics 365, Lamna Healthcare keeps all components in the default solution but maintains a unique prefix. Dynamics is a non-code environment.

Option sets must be used whenever possible. For example, the allergies field displays a list of common allergies. You must include an option named Other in each option set to allow users to enter a value that is not available in the option set. When Other is selected, the form must display a text field that requires entry.

Problem statements

Parents of a child named Elizabeth recently changed her surname. The parent hands in a field trip consent form that includes the new surname. The support worker cannot find the child in the system.

Users report having to sign back into the system very frequently, often multiple times during the course of a period of usage.

When children move to new age groups, medication records for the child are not visible to the new group's childcare workers.

NEW QUESTION: 2

Which licensed feature allows a customer to collect historical performance data and perform hot spot analysis on a C-series SAN fabric?

- A. SAN Connection Manager
- B. MDS Fabric Manager Server software
- C. Advanced Web tools
- D. Advanced Performance Monitor

Answer: B

Explanation:

The "Standard" Cisco Fabric Manager software that is included at no charge with the MDS switches provides basic switch configuration and troubleshooting capabilities. The Cisco Fabric Manager Server (FMS) Package extends Cisco Fabric Manager by providing historical performance data collection for network traffic hot-spot analysis, centralized management services and advanced application integration.

NEW QUESTION: 3

AW Computing wants to identify if certain customer is eligible for a service contract based on product. How to check it?

- A. Service Contracts with Contract Line Items and Entitlements
- B. Service Contracts with Entitlements
- C. Entitlements Only

Answer: A

NEW QUESTION: 4

Which two types of VLANs using PVLANS are valid? (Choose two.)

- A. isolated
- B. backup
- C. promiscuous
- D. secondary

E. community

Answer: A,E

Explanation:

Promiscuous (P) :- Usually connects to a router - a type of a port which is allowed to send and receive frames from any other port on the VLAN.

Isolated (I) : This type of port is only allowed to communicate with P ports - they are "stub". This type of ports usually connects to hosts.
