NEW QUESTION: 1

ある会社が他のテナントがいる賃貸ビルの3階を占めています。境界点から会社の管理されたスペースへのパスは、他の会社によって管理されている安全でないエリアを通ります。管理されていないスペースを通過する会社のケーブルを保護するために使用できるのは、次のうちどれですか？

- A. コンジット
- B. ケーブルロック
- C. バヨネットニール-コンセルマン
- D. プレナム定格ケーブル

Answer: B

NEW QUESTION: 2

ネットワーク上のユーザが電子メールの添付ファイルとして受信したボットネットプログラムを誤って起動するCisco

Firepowerがボットネット攻撃だけを検出してブロックするために使用するメカニズムのタイプは何ですか？

- A. reputation-based
- B. botnet traffic filter
- C. network-based access control rule
- D. user-based access control rule

Answer: B

NEW QUESTION: 3

- A. Option D
- B. Option B
- C. Option A
- D. Option C
- E. Option F
- F. Option E

Answer: B,C,E

Explanation:

Network virtualization architecture has three main components:

+ Network access control and segmentation of classes of users: Users are authenticated and either allowed or denied into a logical partition. Users are segmented into employees, contractors and consultants, and guests, with respective access to IT assets. This component identifies users who are authorized to access the network and then places them into the appropriate logical partition.

+ Path isolation: Network isolation is preserved across the entire enterprise: from the edge to the campus to the WAN and back again. This component maintains traffic partitioned over a routed infrastructure and transports traffic over and between isolated partitions. The function of mapping isolated paths to VLANs and to virtual services is also performed in component.

+ Network Services virtualization: This component provides access to shared or dedicated network services such as security, quality of service (QoS), and address management (Dynamic Host Configuration Protocol [DHCP] and Domain Name System [DNS]). It also applies policy per partition and isolates application environments, if required.

NEW QUESTION: 4

ネットワーク技術者は、特定のユーザー名とパスワードを持つリモートユーザーの一時的な入力を許可し、ユーザーがインターネット経由でネットワーク全体にアクセスできるようにしたいと考えています。どのACLを使用できますか？

- A. reflexive
- B. dynamic
- C. standard
- D. extended

Answer: B

Explanation:

We can use a dynamic access list to authenticate a remote user with a specific username and password. The authentication process is done by the router or a central access server such as a TACACS+ or RADIUS server. The configuration of dynamic ACL can be read here:
