NEW QUESTION: 3
You want to migrate your Oracle 11g database as a pluggable database (PDB) in a multitenant container database (CDB).
Examine the steps required to perform the migration:
1. Use Data Pump export to perform a full transportable export on the source database with the export parameter VERSION=12.

2. Place all tablespaces in read-only mode on the source database.
3. Upgrade the source database to Oracle Database 12c.
4. Copy the dump file and data files to the desired location in the target database.
5. Create a new PDB in the target CDB.
6. Synchronize the PDB on the target CDB.
7. Use Data Pump import on the new PDB by using the full transportable import options.
Identify the required steps in the correct order.
A. 2, 5, 1, 4, 7, and 6
B. 1, 5, 4, 7, and 6
C. 3, 2, 5, 1, 4, and 7
D. 2, 1, 3, 5, 7, and 6
Answer: A
Explanation:
Explanation
This example is a dumpfile-based full transportable export/import operation. In this case the metadata from the source database is exported to a dump file, and both the dump file and the tablespace data files are transferred to a new system. The steps would be as follows:
* (2) Set user tablespaces in the source database to READ ONLY.
* (5) Create a CDB on the destination system, including a PDB into which you will import the source database.
* (1) From the Oracle Database 11g Release 2 (11.2.0.3) environment, export the metadata and any data residing in administrative tablespaces from the source database using the FULL=Y and TRANSPORTABLE=ALWAYS parameters. Note that the VERSION=12 parameter is required only when exporting from an Oracle Database 11g Release 2 database.
* (4) Copy the tablespace data files from the source system to the destination system.
* (7) In the Oracle Database 12c environment, connect to the pre-created PDB and import the dump file.

NEW QUESTION: 4
DRAG DROP
You have an Office 365 subscription and an on-premises deployment of Active Directory. The environment also contains a deployment of Active Directory Federation Services (AD FS).
The AD FS deployment contains an AD FS server named ADFS1 and a Web Application Proxy server named WAPSERVER1.
The service communications certificate expires in one day.
You need to replace the certificate on the servers in the AD FS deployment. The solution must maintain client encryption.
