Answer: B

Explanation:

Explanation/Reference:

Explanation:

The Biba model was developed after the Bell-LaPadula model. It is a state machine model

similar to the Bell-LaPadula model. Biba addresses the integrity of data within applications. The Biba model uses a lattice of integrity levels. If implemented and enforced properly, the Biba model prevents data from any integrity level from flowing to a higher integrity level.

Biba has three main rules to provide this type of protection:

*-integrity axiom: A subject cannot write data to an object at a higher integrity level (referred to as "no

write up").

Simple integrity axiom: A subject cannot read data from a lower integrity level (referred to as "no read

down").

Invocation property: A subject cannot request service (invoke) of higher integrity.

Incorrect Answers:

A: The * (star) integrity axiom means "no write up", not "no read up".

B: The * (star) integrity axiom means "no write up", not "no write down".

C: The * (star) integrity axiom means "no write up", not "no read down".
