NEW QUESTION: 1
A technician wants to configure a wireless router at a small office that manages a family-owned dry cleaning business. The router will support five laptops, potential smartphones, a wireless printer, and occasional guests.
Which of the following wireless configuration is BEST implemented in this scenario?
A. Captive portal with two-factor authentication
B. Dual SSID with WPA2-PSK
C. Single SSID with WPA2-Enterprise
D. 802.1X with guest VLAN
Answer: D

NEW QUESTION: 2
Which of the following encryption types is used with WPA2?
A. SSL
B. AES
C. TKIP
D. SSH
Answer: B

NEW QUESTION: 3
You monitor Azure virtual machines by using Azure Monitor.
You plan to restart the virtual machines when CPU usage exceeds 95 percent for more than 30 minutes.
You need to create an alert in Azure Monitor to restart the virtual machines. The solution must minimize administrative effort.
Which type of action should you use in the alert?
A. Logic App

B. Webhook
C. Automation Runbook
D. ITSM
Automation runbooks allows you to automatically perform standard remediations in response to VM alerts, like restarting or stopping the VM.
Previously, during VM alert rule creation you were able to specify an Automation webhook to a runbook in order to run the runbook whenever the alert triggered. However, this required you to do the work of creating the runbook, creating the webhook for the runbook, and then copying and pasting the webhook during alert rule creation. With this new release, the process is much easier because you can directly choose a runbook from a list during alert rule creation, and you can choose an Automation account which will run the runbook or easily create an account.
Answer: C
Explanation:
