- B.** Your original Oracle Home is available for recovery operations.
- C.** It is the recommended approach when your Oracle Home does not follow Oracle Flexible Architecture.
- D.** You are not able to retrieve the path recommendations because you are not connected to the network.
- E.** It is the recommended approach when downtime is not a time constraint.

Answer: B

Explanation:

Explanation/Reference:

Using this mechanism [out-of-place patching] means that the only downtime will take place when the

Databases from the previous Home are switched to run from the new Home. If there is any issue with the

Database patch, you can switch back to the previous unpatched Home since it is still available.

So, patch

rollback is a lot faster.

Note: A new mechanism for patching has been provided in Oracle Enterprise Manager Cloud Control 12c,

known as Out of Place Patching. This is now the recommended method and creates a new Oracle Home,

which is then patched while the previous Home is still operational. All this is done using an out-of-box

You are deploying an application to a Compute Engine VM in a managed instance group. The application must be running at all times, but only a single instance of the VM should run per GCP project. How should you configure the instance group?

- A. Set autoscaling to On, set the minimum number of instances to 1, and then set the maximum number of instances to 1.
- B. Set autoscaling to Off, set the minimum number of instances to 1, and then set the maximum number of instances to 2.
- C. Set autoscaling to Off, set the minimum number of instances to 1, and then set the maximum number of instances to 1.
- D. Set autoscaling to On, set the minimum number of instances to 1, and then set the maximum number of instances to 2.

Answer: A

Explanation:

If for any reason VM crashes autoscaling set as OFF wont spin another instance in its place which would defeat the purpose of always running VM(tough there will be some disruption) as -- Max-num-Instance is set to 1.

There is no mention of auto-healing is set or not which is disable by default.

B - Incorrect - Does not fit the requirement because AFTER the deletion of the instance, no other instance was created.
