- D. Are you exploring new cloud and BYOD business models
- E. What are the operating hours of your security response team

**Answer: B,D**

Explanation:

Explanation

**NEW QUESTION: 4**

Your company subscribes to the Office 365 Enterprise E1 plan. You are the Microsoft Exchange Online administrator.

In the last week, employees have reported that they are receiving non-delivery report messages from other companies. The employees have not sent messages to recipients within those companies.

You need to prevent non-delivery report messages from reaching employees.

Which content filter option should you turn on in the Exchange admin center?

- A. Block all bulk email messages
- B. Conditional Sender ID filtering: hard fail
- C. SPF record: hard fail
- D. NDR backscatter

**Answer: D**

Explanation:

The non-delivery report messages the users are receiving are the result of Backscatter.

Backscatter is the automated bounce messages that are sent by mail servers, typically as a result of incoming spam. Because Exchange Online Protection (EOP) is a spam filtering service, email messages sent to nonexistent recipients and to other suspicious destinations are rejected by the service. When this happens, EOP generates a non-delivery report (NDR) message and delivers it back to the "sender." Because spammers frequently use a forged or invalid "From" address in their messages, the sender address to which the NDR is sent may result in a backscatter message.
