**Answer: B**

Explanation:

Explanation

It is better to use a clustered index.

Columnstore indexes are the standard for storing and querying large data warehousing fact

tables. It uses column-based data storage and query processing to achieve up to 10x query performance gains in your data warehouse over traditional row-oriented storage, and up to 10x data compression over the uncompressed data size.

In SQL Server, rowstore refers to table where the underlying data storage format is a heap, a clustered index, or a memory-optimized table.
