EBSボリュームに格納する単一のAmazon

EC2インスタンスを使用してAWSでウェブアプリケーションをホストしています。スケーラビリティと可用性を高めるために、会社はアーキテクチャを複製し、別のEC2インスタンスとEBSボリュームを別のアベイラビリティゾーンに作成しました。両方をApplication Load

Balancerの背後に配置するこの変更を完了した後、ユーザーは、Webサイトを更新するたびに、ドキュメントの一部または他のサブセットを同時に表示できるが、すべてのドキュメントを同時に表示することはできないと報告しました。すべてのドキュメントを一度に表示しますか？

A. Configure the Application Load Balancer to send the request to both servers Return each document from the correct server

- B.** Copy the data from both EBS volumes to Amazon EFS Modify the application to save new documents to Amazon EFS
- C.** Configure the Application Load Balancer to direct a user to the server with the documents
- D.** Copy the data so both EBS volumes contain all the documents

Answer: B

Explanation:

<https://docs.aws.amazon.com/efs/latest/ug/how-it-works.html#how-it-works-ec2> Amazon EFS provides file storage in the AWS Cloud. With Amazon EFS, you can create a file system, mount the file system on an Amazon EC2 instance, and then read and write data to and from your file system. You can mount an Amazon EFS file system in your VPC, through the Network File System versions 4.0 and 4.1 (NFSv4) protocol. We recommend using a current generation Linux NFSv4.1 client, such as those found in the latest Amazon Linux, Redhat, and Ubuntu AMIs, in conjunction with the Amazon EFS Mount Helper. For instructions, see Using the amazon-efs-utils Tools.

For a list of Amazon EC2 Linux Amazon Machine Images (AMIs) that support this protocol, see NFS Support. For some AMIs, you'll need to install an NFS client to mount your file system on your Amazon EC2 instance. For instructions, see Installing the NFS Client.

You can access your Amazon EFS file system concurrently from multiple NFS clients, so applications that scale beyond a single connection can access a file system. Amazon EC2 instances running in multiple Availability Zones within the same AWS Region can access the file system, so that many users can access and share a common data source.
