**NEW QUESTION: 1**
Which statement about OTV is true?
**A.** OTV data groups can operate only in PIM sparse-mode.
**B.** The overlay interface becomes active immediately when it is configured.
**C.** The overlay interface becomes active only when configuration is complete and it is manually enabled.
**D.** The interface facing the OTV groups must be configured with the highest MTU possible.
**Answer: C**
Explanation:
OTV has the following configuration guidelines and limitations: - If the same device serves as the default gateway in a VLAN interface and the OTV edge device for the VLANs being extended, configure OTV on a device (VDC or switch) that is separate from the VLAN interfaces (SVIs). - When possible, we recommend that you use a separate nondefault VDC for OTV to allow for better manageability and maintenance. - An overlay interface will only be in an up state if the overlay interface configuration
is complete and enabled (no shutdown). The join interface has to be in an up state.
