Packets from a router with policy-based routing configured are failing to reach the next hop. Which two additions can you make to the router configuration to enable the packets to flow correctly? (Choose two.)

A. Specify the next hop as an interface.

B. Specify the next hop as an address.

C. Add a match-any permit statement to the route map.

D. Enable ip proxy-arp on the exiting interface.

Answer: B,D

Explanation:

Here is an example:

```
Router(config)#route-map Engineers permit 20 Router(config-route-map)#match ip address 2
```

```
Router(config-route-map)#set interface Ethernet1
```

Here, instead of specifying a next-hop, it specifies that any packets matching this rule will be forwarded directly out the interface Ethernet1. This means that either the destination device must be on this segment, or there must be a router configured with Proxy ARP that can forward the packet to the ultimate destination.
