NEW QUESTION: 3
Mount Vesuvius, a volcano located between the ancient Italian cities of Pompeii and Herculaneum, has received much attention because of its frequent and destructive eruptions. The most
famous of these eruptions occurred in A. D. 79. The volcano had been inactive for centuries. There was
little warning of the coming eruption, although one account unearthed by archaeologists says that a hard
rain and a strong wind had disturbed the celestial calm during the preceding night. Early the next morning,
the volcano poured a huge river of molten rock down upon Herculaneum, completely burying the city and
filling in the harbor with coagulated lavA. Meanwhile, on the other side of the mountain, cinders, stone and
ash rained down on Pompeii. Sparks from the burning ash ignited the combustible rooftops quickly. Large
portions of the city were destroyed in the conflagration. Fire, however, was not the only cause

of
destruction. Poisonous sulphuric gases saturated the air. These heavy gases were not buoyant in the
atmosphere and therefore sank toward the earth and suffocated people. Over the years, excavations of
Pompeii and Herculaneum have revealed a great deal about the behavior of the volcano.
By analyzing data, much as a zoologist dissects a specimen animal, scientist have concluded that the
eruption changed large portions of the area's geography. For instance, it turned the Sarno River from its
course and raised the level of the beach along the Bay of Naples. Meteorologists studying these events
have also concluded that Vesuvius caused a huge tidal wave that affected the world's climate. In addition
to making these investigations, archaeologists have been able to study the skeletons of victims by using
distilled water to wash away the volcanic ash. By strengthening the brittle bones with acrylic paint,
scientists have been able to examine the skeletons and draw conclusions about the diet and habits of the
residents. Finally, the excavations at both Pompeii and
Herculaneum have yielded many examples of classical art, such as jewelry made of bronze, which is an
alloy of copper and tin. The eruption of Mount Vesuvius and its tragic consequences have provided us
with a wealth of data about the effects that volcanoes can have on the surrounding areA. Today
volcanologists can locate and predict eruptions, saving lives and preventing the destruction of cities and
cultures.

A. solid
B. flowing
C. liquid
D. gas
