### **NEW QUESTION: 1**

You are working with a client who does not allow the storage of user or schema passwords in plain text.

How can you configure the Oracle Loader for Hadoop configuration file to meet the requirements of this client?

- A.** Configure the configuration file to prompt for the password during remote job executions.
- B.** Store the password in an Access Control List and configure the ACL location in the configuration file.
- C.** Encrypt the password in the configuration file by using Transparent Data Encryption.
- D.** Store the information in an Oracle wallet and configure the wallet location in the configuration file.

### **Answer: D**

Explanation:

In online database mode, Oracle Loader for Hadoop can connect to the target database using the credentials provided in the job configuration file or in an Oracle wallet.

Oracle Wallet Manager is an application that wallet owners use to manage and edit the security credentials in their Oracle wallets. A wallet is a password-protected container used to store authentication and signing credentials, including private keys, certificates, and trusted certificates needed by SSL.

Note: Oracle Wallet Manager provides the following features:

### NEW QUESTION: 4

Which statement about RBAC user roles on a Cisco Nexus switch is true?

- A. Access to a command takes priority over being denied access to a command.
- B. The default SAN administrator role restricts configuration to Fibre Channel interfaces.
- C. On a Cisco Nexus 7000 Series Switch, roles are shared between VDCs.
- D. The predefined roles can only be changed by the network administrator (superuser).
- E. If you belong to multiple roles, you can execute only the commands that are permitted by both roles (logical AND).

**Answer: A**

Explanation:

If you belong to multiple roles, you can execute a combination of all the commands permitted by these roles. Access to a command takes priority over being denied access to a command. For example, suppose a user has RoleA, which denied access to the configuration commands.

However, the users also have RoleB, which has access to the configuration commands. In this case, the users have access to the configuration commands.
