Auto

Scalingグループは、5インスタンスの希望する容量で実行されており、Cloudwatchアラームから容量を1増やすためのトリガーを受信します。クールダウン期間は5分です。

Cloudwatchは、2分後に必要な容量を1減らすために別のトリガーを送信します。4分後のインスタンス数はいくつになりますか？

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

The cool down period is the time difference between the end of one scaling activity (can be start or terminate) and the start of another one (can be start or terminate). During the cool down period, Auto Scaling does not allow the desired capacity of the Auto Scaling group to be changed by any other CloudWatch alarm. Thus, in this case the trigger from the second alarm will have no effect.

A company's Machine Learning Specialist needs to improve the training speed of a time-series forecasting model using TensorFlow. The training is currently implemented on a single-GPU machine and takes approximately 23 hours to complete. The training needs to be run daily. The model accuracy is acceptable, but the company anticipates a continuous increase in the size of the training data and a need to update the model on an hourly, rather than a daily, basis. The company also wants to minimize coding effort and infrastructure changes. What should the Machine Learning Specialist do to the training solution to allow it to scale for future demand?
