You are implementing mapping data flows in Azure Data Factory to convert daily logs of taxi

records into aggregated datasets.

You configure a data flow and receive the error shown in the following exhibit.

You need to resolve the error.

Which setting should you configure? To answer, select the appropriate setting in the answer area.

Answer:

Explanation:

Explanation

The Inspect tab provides a view into the metadata of the data stream that you're transforming. You can see column counts, the columns changed, the columns added, data types, the column order, and column references.

Inspect is a read-only view of your metadata. You don't need to have debug mode enabled to see metadata in the Inspect pane.
