#### **NEW QUESTION: 1**

Which of the following can be used to maintain a higher level of security in a SAN by allowing isolation of mis-configurations or faults?

- A. Port security
- B. VSAN
- C. VLAN
- D. Protocol security

**Answer: B**

Explanation:

A storage area network (SAN) is a secondary network that offers storage isolation by consolidating storage devices such as hard drives, drive arrays, optical jukeboxes, and tape libraries. Virtualization can be used to further enhance the security of a SAN by using switches to create a VSAN. These switches act as routers controlling and filtering traffic into and out of the VSAN while allowing unrestricted traffic within the VSAN.

#### **NEW QUESTION: 2**

You have private video content in S3 that you want to serve to subscribed users on the Internet. User IDs, credentials, and subscriptions are stored in an Amazon RDS database. Which configuration will allow you to securely serve private content to your users?

Please select:

- A. Create an S3 bucket policy that limits access to your private content to only your subscribed users' credentials. Create a CloudFront Identity user for your subscribed users and assign the GetObject permission to this user. All objects and buckets by default are private. The

pre-signed URLs are useful if you want your user/customer to be able upload a specific object to your bucket but you don't require them to have AWS security credentials or permissions. When you create a pre-signed URL, you must provide your security credentials, specify a bucket name, an object key, an HTTP method (PUT for uploading objects), and an expiration date and time. The pre-signed URLs are valid only for the specified duration.

**B.** Generate pre-signed URLs for each user as they request access to protected S3 content

**C.** Create an IAM user for each subscribed user and assign the GetObject permission to each IAM user

**Answer: B**

Explanation:

Option B is invalid because this would be too difficult to implement at a user level.

Option C is invalid because this is not possible

Option D is invalid because this is used to serve private content via Cloudfront For more information on pre-signed urls, please refer to the Link:

<http://docs.aws.amazon.com/AmazonS3/latest/dev/PresignedUrlUploadObject.html> The correct answer is: Generate pre-signed URLs for each user as they request access to protected S3 content Submit your Feedback/Queries to our Experts

### NEW QUESTION: 3

Which one of the following commands could limit WLC output from subsequent debug commands to show only information associated with a specific wireless client device that has the MAC address 00:0c:41:07:33:a6?

**A.** Debug mac addr 00-0c-41-07-33-a6 enable

**B.** Debug mobility addr 00:0c:41:07:33:a6 enable

**C.** Debug mac addr 00:0c:41:07:33:a6

**D.** Debug mobility addr 00:0c:41:07:33:a6

**Answer: C**

### NEW QUESTION: 4

An entity sells 1,500 units of a particular item each year and orders the items in equal quantities of 500 units at a price of US \$5 per unit. No safety stocks are held. If the entity has a cost of capital of 12%, its annual opportunity cost of carrying inventory is:

**A.** US\$300

**B.** US\$150

**C.** US\$180

**D.** US\$900

**Answer: B**

Explanation:

The annual opportunity cost of carrying inventory equals the average inventory level, times the per-unit purchase price, times the cost of capital. The average inventory level is the order quantity divided by 2. Thus, the annual opportunity cost of carrying inventory is US \$150 [(500 units -2) x \$ 5x .12].
