NEW QUESTION: 1

Welche der folgenden Praktiken des Personalmanagements führt BEST zur Aufdeckung betrügerischer Aktivitäten?

- A. Ethikkodex für Mitarbeiter
- B. Hintergrundüberprüfungen
- C. Zeitberichterstattung
- D. Obligatorische Freizeit

Answer: D

NEW QUESTION: 2

Which two analog telephony signaling methods are most vulnerable to glare conditions? (Choose two.)

- A. E&M Wink-start
- B. FXS Loop-start
- C. E&M Delay-dial
- D. FXO Ground-start
- E. E&M Immediate-start
- F. E&M Feature Group D

Answer: B,E

Explanation:

Explanation

The loop start signaling method is more common and is typically used by residential phone lines. When a voice port is configured with loop start signaling, the device (telephone) closes the circuit loop that signals the CO voice port to provide dial tone; an incoming call is signaled on the CO by supplying a predefined voltage on the line. The loop start signaling method has one main disadvantage in that it has no method of preventing both sides of the connection from attempting to seize the line at the same time; this condition is referred to as glare.

Because of this, loop start signaling is typically not used on high demand circuits.

With immediate-start, the calling side of the connection seizes the line by going off hook on the E-lead and address information is sent using dual-tone multifrequency (DTMF) digits.

Immediate start signaling is vulnerable to glare just like loop-start signaling.

NEW QUESTION: 3

Which two statements about file storage service (FSS) are accurate? (Choose two.)

- A. Encryption of file system in FSS is optional
- B. Data in transit to an FSS mount target is encrypted
- C. Security lists can be used as a virtual firewall to prevent an instance from mounting an FSS mount target within the same subnet
- D. FSS leverages UNIX user group and permission checking for file access security
- E. Identity and Access Management (IAM) controls which file systems are mountable by which instances

Answer: B,D

Explanation:

All data is encrypted at rest, and In-transit encryption provides a way to secure your data between instances and mounted file systems using TLS v. 1.2 (Transport Layer Security) encryption. File Storage service supports the AUTH_UNIX style of authentication and permission checking for remote NFS client requests.
