NEW QUESTION: 1

You create a stored procedure that retrieves all of the rows from a table named Table1. You need to recommend a solution to ensure that all of the statements in the stored procedure can be executed if another transaction is modifying rows in Table1 simultaneously.

What should you recommend?

- A. A database snapshot
- B. Indexes
- C. Filegroups
- D. Snapshot isolation

Answer: D

Explanation:

Explanation/Reference:

Explanation:

Once snapshot isolation is enabled, updated row versions for each transaction are maintained in tempdb.

A unique transaction sequence number identifies each transaction, and these unique numbers are recorded for each row version.

The transaction works with the most recent row versions having a sequence number before the sequence number of the transaction.

Newer row versions created after the transaction has begun are ignored by the transaction.

NEW QUESTION: 2

- A. Option C
- B. Option B
- C. Option A
- D. Option D

Answer: C

Explanation:

To disable or enable a user account using Active Directory Administrative Center

1.To open Active Directory Administrative Center, click Start , click Administrative Tools , and
