NEW QUESTION: 2

CORRECT TEXT

Scenario: CCH acquired Xirtic, and a Citrix Administrator has created a domain trust between the two organizations. Xirtic has an existing XenDesktop deployment, which consists of a site named Xirtic and one Delivery Controller named XRT01. A Citrix Administrator is tasked with integrating Xirtic's XenDesktop deployment into CCH's XenDesktop deployment. Within CCH's environment, communication to and from XRT01 must go over HTTP and must use port 80.

At the moment, both Xirtic and CCH users log into their respective environments by entering their domains and usernames, for example: domainusername. The administrator has been instructed to ensure users can log in using their usernames only or without the need to authenticate when using Citrix Receiver when possible.

Note the following:

If a new store is created, the display name of the Delivery Controller in the new store should be "Xirtic". If a new Delivery Controller is added to the existing store, the display name of the new Delivery Controller should be "Xirtic". If the Delivery Controller setting in the existing store is modified to merge the CCH and Xirtic Delivery Controllers, the display name of the Delivery Controller should be "Xirtic".

All systems in the CCH environment are members of the CCH domain. All systems in the Xirtic environment are members of the Xirtic domain. Use hostnames only when configuring settings

in this simulated environment; do not assume the FQDN. Tasks:

1. Configure StoreFront to integrate Xirtic's environment into the CCH environment.
2. Configure user access to meet the requirements outlined in the scenario.

3) Once the store is created it will give you the web browser URL that you can use to access it. Also take note that to access StoreFront from a web browser you must append "Web" to the store URL, as the URL shows below. Don't try going to /Citrix/Store as that won't work.
