**NEW QUESTION: 4**

You need to recommend which tasks must be performed to deliver email messages to the Internet if CH-EX2 and CH-EX3 fail to connect to the Internet. The solution must ensure that all queued email is sent.

Which two tasks should you recommend? (Each correct answer presents part of the solution. Choose two.)

A. Run the set-sendconnector -identity ch-to-internet -frontendproxyenabled Strue command.

B. Create a new Send connector on a server in the Baltimore office.

C. Disable the CH-to-Internet Send connector.

D. Modify the cost of the CH-to-Internet Send connector.

E. Run the retry-queue ch-to-internet command.

**Answer: B,C**

Explanation:

The Baltimore and Chicago offices have independent Internet connections. Internet connectivity for the Los Angeles office is provided through Chicago.

Currently no mail servers in Chicago. Only in Baltimore and Los Angeles.

Once the transition to Exchange Server 2013 in the Chicago office is complete, all mail flow to and from the Internet will be managed centrally through that office by using a Send connector that has the following configurations:

Connector name: CH-to-Internet

Address space \*

Source servers: CH-EX2, CH-EX3

Cost: 10

When you deploy Exchange 2013, outbound mail flow cannot occur until you configure a Send connector to route outbound mail to the Internet.

NOT A

Will not resolve the issue.

Use the Retry-Queue cmdlet to force a connection attempt for a queue on a Mailbox server

or an Edge  
Transport server.

#### EXAMPLE 1

This example forces a connection attempt for all queues that meet the following criteria:  
The queues are holding messages for the domain contoso.com.

The queues have a status of Retry.

The queues are located on the server on which the command is executed.

```
Retry-Queue -Filter {NextHopDomain -eq "contoso.com" -and Status -eq "Retry"}
```

#### NOT C

Modifying the cost will not fix the issue of CH-EX2 and CH-EX3 failing to connect to the Internet.

Cost is used to set the priority of this connector, used when two or more connectors are configured for the same address space. The lower the cost higher the priority.

#### NOT D

Modifying the send connector will not fix the internet connection from chicago mail server to the internet.

Use the Set-SendConnector cmdlet to modify a Send connector.

#### EXAMPLE 1

This example makes the following configuration changes to the Send connector named Contoso.com Send Connector:

Sets the maximum message size limit to 10 MB.

Changes the connection inactivity time-out to 15 minutes.

```
Set-SendConnector "Contoso.com Send Connector" -MaxMessageSize 10MB -  
ConnectionInactivityTimeout
```

00:15:00 The FrontendProxyEnabled parameter routes outbound messages through the CAS server, where destination specific routing, such as DNS or IP address, is set, when the parameter is set to \$true. E Need to disable the send connector from Chicago to the internet so that when a new send connector on the Baltimore server is created, email can be sent to the internet.
