We guarantee you 100% pass in a short time, The H35-480_V3.0 correct questions & answers are the latest and constantly updated in accordance with the changing of the real H35-480_V3.0 exam, which will ensure you solve all the problem in the actual test.

Download your desired H35-480_V3.0 exam dumps now and begin your journey towards the H35-480_V3.0 (Huawei Certified Technician for Data Center exam certificate without failing.

The PDF versions of H35-480_V3.0 study materials can be printed into a paper file, more convenient to read and take notes.

NEW QUESTION: 1

- A. Remove-MsolServicePrincipalCredential
- B. Remove-MsolServicePrincipal
- C. Set-AdUser
- D. Set-MsolUser

Answer: C

Explanation:

Explanation

If your organization synchronizes user accounts to Office 365 from a local Active Directory environment, you must delete those user accounts in your local Active Directory service. You can't delete or restore them in Office 365. Therefore, you have to make use of the Set-AdUser cmdlet.

NEW QUESTION: 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You administer the Microsoft Exchange Server 2007 environment for that has 2,500 mailboxes. You plan to migrate to Office 365 and Exchange Online.

You have the following requirements:

Do not install additional software on-premises to assist with the migration.

Include all folders in the mailboxes including calendar items and tasks.

Do not depend on any user initiated processes.

You need to recommend a migration strategy.

Which migration strategy should you recommend?

Solution: Perform a staged migration.

Does the solution meet the goal?

A. No

B. Yes

Answer: B

Explanation:

Topic 3, Contoso Ltd

Existing Environment

Currently, Contoso uses multiple types of servers for business operations, including the following:

File servers

Domain controllers

Microsoft SQL Server servers

Your network contains an Active Directory forest named contoso.com. All servers and client computers are joined to Active Directory.

You have a public-facing application named App1. App1 is comprised of the following three tiers:

A SQL database

A web front end

A processing middle tier

Each tier is comprised of five virtual machines. Users access the web front end by using HTTPS only.

Requirements

Planned Changes

Contoso plans to implement the following changes to the infrastructure:

Move all the tiers of App1 to Azure.

Move the existing product blueprint files to Azure Blob storage.

Create a hybrid directory to support an upcoming Microsoft Office 365 migration project.

Technical Requirements

Contoso must meet the following technical requirements:

Move all the virtual machines for App1 to Azure.

Minimize the number of open ports between the App1 tiers.

Ensure that all the virtual machines for App1 are protected by backups.

Copy the blueprint files to Azure over the Internet.

Ensure that the blueprint files are stored in the archive storage tier.

Ensure that partner access to the blueprint files is secured and temporary.

Prevent user passwords or hashes of passwords from being stored in Azure.

Use unmanaged standard storage for the hard disks of the virtual machines.

Ensure that when users join devices to Azure Active Directory (Azure AD), the users use a mobile phone to verify their identity.

Minimize administrative effort whenever possible.

User Requirements

Contoso identifies the following requirements for users:

Ensure that only users who are part of a group named Pilot can join devices to Azure AD.

Designate a new user named Admin1 as the service administrator of the Azure subscription.

Admin1 must receive email alerts regarding service outages.

Ensure that a new user named User3 can create network objects for the Azure subscription.
