NEW QUESTION: 2
Which of the following would a security administrator use to verify the integrity of a file?
A. Time stamp
B. File descriptor
C. MAC times
D. Hash
Answer: D
Explanation:
Hashing refers to the hash algorithms used in cryptography. It is used to store data, such as hash tables and it is a one- w ay transformation in order to validate the integrity of data.
Incorrect Answers:
A. Time stamp is used to check whether a certificate has expired or not.
B. MAC times are pieces of file system metadata which record when certain events pertaining to a computer file occurred most recently. The events are usually described as "modification" (the data in the file was modified),
"access" (some part of the file was read), and "metadata change" (the file's permissions or ownership were modified)
- also commonly used in forensics.

C. File descriptor - describing a file is not the same as verifying the integrity of the file.
