### **NEW QUESTION: 1**

- A. Option D
- B. Option C
- C. Option A
- D. Option B

**Answer: A**

Explanation:

On DSW1, related to HSRP, under VLAN 10 change the given track 1 command to instead use the track 10 command.

Case Study: 13

Ticket 13: DHCP Issue

Topology Overview (Actual Troubleshooting lab design is for below network design)

\*Client Should have IP 10.2.1.3

\*EIGRP 100 is running between switch DSW1 & DSW2

\*OSPF (Process ID 1) is running between R1, R2, R3, R4

\*Network of OSPF is redistributed in EIGRP

\*BGP 65001 is configured on R1 with Webserver cloud AS 65002

\*HSRP is running between DSW1 & DSW2 Switches

The company has created the test bed shown in the layer 2 and layer 3 topology exhibits.

This network consists of four routers, two layer 3 switches and two layer 2 switches. In the IPv4 layer 3 topology, R1, R2, R3, and R4 are running OSPF with an OSPF process number 1.

DSW1, DSW2 and R4 are running EIGRP with an AS of 10. Redistribution is enabled where necessary.

R1 is running a BGP AS with a number of 65001. This AS has an eBGP connection to AS 65002 in the ISP's network.

Because the company's address space is in the private range.

R1 is also providing NAT translations between the inside (10.1.0.0/16 & 10.2.0.0/16) networks and outside

(209.65.0.0/24) network.

ASW1 and ASW2 are layer 2 switches.

NTP is enabled on all devices with 209.65.200.226 serving as the master clock source.

The client workstations receive their IP address and default gateway via R4's DHCP server.

The default gateway address of 10.2.1.254 is the IP address of HSRP group 10 which is running on DSW1 and DSW2.

In the IPv6 layer 3 topology R1, R2, and R3 are running OSPFv3 with an OSPF process number 6.

DSW1, DSW2 and R4 are running RIPng process name RIP\_ZONE.

The two IPv6 routing domains, OSPF 6 and RIPng are connected via GRE tunnel running over the underlying IPv4 OSPF domain. Redistribution is enabled where necessary.

Recently the implementation group has been using the test bed to do a 'proof-of-concept' on several implementations. This involved changing the configuration on one or more of the devices. You will be presented with a series of trouble tickets related to issues introduced during these configurations.

Note: Although trouble tickets have many similar fault indications, each ticket has its own issue and solution.

Each ticket has 3 sub questions that need to be answered & topology remains same.

Question-1 Fault is found on which device,

Question-2 Fault condition is related to,

Question-3 What exact problem is seen & what needs to be done for solution

=====

## Solution

Steps need to follow as below:-

When we check on client 1 & Client 2 desktop we are not receiving DHCP address from R4

\* ipconfig ----- Client will be receiving Private IP address 169.254.X.X

From ASW1 we can ping 10.2.1.254....

\*

On ASW1 VLAN10 is allowed in trunk & access command will is enabled on interface but DHCP IP address is not

\* recd.

On R4 the DHCP IP address is not allowed for network 10.2.1.0/24 which clearly shows the problem lies on R4 & the problem is with DHCP

## NEW QUESTION: 2

A company named Contoso, Ltd. has an Exchange Server 2016 organization that uses an SMTP domain named contoso.com.

Contoso merges with a company named Fabrikam, Inc. Fabrikam uses an SMTP domain named fabrikam.com.

In the Contoso organization, you create an accepted domain for fabrikam.com. You configure the MX records of fabrikam.com to point to the Exchange servers of the Contoso organization. You configure several users in the Contoso organization to have an email address that uses the fabrikam.com SMTP domain.

Users report that when they send email to the fabrikam.com domain, they receive a non-delivery report (NDR) when the recipient is from the Fabrikam organization.

You need to ensure that all of the users who have a fabrikam.com email address can receive email.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
