会社は、ユーザーがアップロードしたドキュメントをAmazon

EBSボリュームに格納する単一のAmazon

EC2インスタンスを使用してAWSでウェブアプリケーションをホストしています。スケーラビリティと可用性を高めるために、会社はアーキテクチャを複製し、別のEC2インスタンスとEBSボリュームを別のアベイラビリティゾーンに作成しました。両方をApplication Load

Balancerの背後に配置するこの変更を完了した後、ユーザーは、Webサイトを更新するたびに、ドキュメントの一部または他のサブセットを同時に表示できるが、すべてのドキュメントを同時に表示することはできないと報告しました。すべてのドキュメントを一度に表示しますか？

A. Copy the data from both EBS volumes to Amazon EFS Modify the application to save new documents to Amazon EFS

B. Configure the Application Load Balancer to direct a user to the server with the documents

C. Configure the Application Load Balancer to send the request to both servers Return each document from the correct server

D. Copy the data so both EBS volumes contain all the documents

Answer: A

Explanation:

<https://docs.aws.amazon.com/efs/latest/ug/how-it-works.html#how-it-works-ec2> Amazon EFS provides file storage in the AWS Cloud. With Amazon EFS, you can create a file system, mount the file system on an Amazon EC2 instance, and then read and write data to and from your file system. You can mount an Amazon EFS file system in your VPC, through the Network File System versions 4.0 and 4.1 (NFSv4) protocol. We recommend using a current generation Linux NFSv4.1 client, such as those found in the latest Amazon Linux, Redhat, and Ubuntu AMIs, in conjunction with the Amazon EFS Mount Helper. For instructions, see Using the amazon-efs-utils Tools.

For a list of Amazon EC2 Linux Amazon Machine Images (AMIs) that support this protocol, see

NFS Support. For some AMIs, you'll need to install an NFS client to mount your file system on your Amazon EC2 instance. For instructions, see [Installing the NFS Client](#). You can access your Amazon EFS file system concurrently from multiple NFS clients, so applications that scale beyond a single connection can access a file system. Amazon EC2 instances running in multiple Availability Zones within the same AWS Region can access the file system, so that many users can access and share a common data source.

NEW QUESTION: 2

Which of the following statements is true regarding Drug-receptor bonds?

- A. Bond formation of between the acetyl group of aspirin and cyclo-oxygenase enzyme is a covalent bond
- B. Electrostatic bonds are stronger than covalent bonds
- C. Hydrophobic bonds are weak bonds and they are important in the interactions of highly water soluble drugs with the lipids of cell membranes
- D. Covalent bonds of drugs with receptors are strong and mostly reversible
- E. Covalent bonding is much more common than electrostatic bonding in drug-receptor interactions

Answer: A

Explanation:

Explanation

Drugs mainly interact with the receptors by means of chemical forces or bonds. There are three major types of drug receptor bonds: - Covalent - Electrostatic - Hydrophobic Covalent bonds are very strong bonds and in most of the cases they are irreversible under biologic conditions. For example, the covalent bond between the acetyl group of aspirin and cyclo-oxygenase enzyme (target enzyme present on the platelets) does not breaks easily. The platelet aggregation effect of aspirin lasts long after free acetyl-salicylic acid has disappeared from the blood (about 15 minutes) and it is reversed only by the synthesis of new cyclo-oxygenase enzyme in new platelets which takes a long time. Hence the effect of aspirin is seen after the drug is stopped. Among the drug receptor interactions, electrostatic bond is much more commonly found than covalent bond. The electrostatic bonds vary from relatively strong linkages between permanently charged ionic molecules to weaker hydrogen bonds and very weak induced dipole interactions such as van der Waals force. The electrostatic bonds are weaker than covalent bonds. Hydrophobic bonds are usually very weak bonds and probably important in the interactions of highly lipid soluble drugs with the lipids of cell membranes and perhaps in the interactions of the drugs with the internal walls of receptor "pockets".
