**Answer:**

Explanation:

Model: Change from full to simple Recovery Model

Newly created user databases use the same recovery model as the model database.

The model database is used as the template for all databases created on an instance of SQL Server. Because tempdb is created every time SQL Server is started, the model database must always exist on a SQL Server system. The entire contents of the model database, including database options, are copied to the new database.

Model: Set compatibility level to 120

For all installations of SQL Server, the default compatibility level is set to the version of the Database Engine. Databases are set to this level unless the model database has a lower compatibility level.
