NEW QUESTION: 1

You have created a complex menu structure with several types of menu objects. To which objects would you assign menu commands?

- A.** main menus
- B.** submenus
- C.** individual menus
- D.** all of the above
- E.** menu items

Answer: D

Explanation:

Explanation/Reference:

Explanation:

The Menu Editor is a graphical design facility for laying out, modifying, and viewing menu modules and their objects. You can use the Menu Editor to carry out all of your menu design work.

Note:

To use the Menu Editor to create a basic structure for your menu, perform the following steps:
1. With the SUMMIT_MENU module selected, perform one of the following actions to invoke the Menu Editor:

Double-click the icon to the left of the module

Right-click the module and select Menu Editor

Select Tools > Menu Editor from the Forms Builder menu

2. When you invoke the Menu Editor, it automatically creates the main menu and one menu item. The main menu is the menu whose items, which can be menu items or submenus, show in

the menu bar when you run a form.

In the Object Navigator, change the name of the main menu to MAIN_MENU in the same way that you changed the name of the menu module.

3. In the Object Navigator, change the name of the menu item to File.

4. Note that the item's display label in the Menu Editor remains the same.

The label is the text that is displayed for the menu item at run time. The label may differ from the name.

You use the name programmatically, and it must follow PL/SQL naming conventions.

Change the label of the menu item by double-clicking <New_Item> in the Menu Editor and typing the new label of File.

5. Create two menu items under File. In the Menu Editor, select File, then click Create Down twice.

6. In the Menu Editor, relabel the menu items to Save and Exit.

Note that creating menu items under the File object creates a FILE_MENU object as a menu with two items under it. Also, when you relabel the items in the Menu Editor, the names of the items, as shown in the Object Navigator, also change.

7. Create another submenu of the main menu and label it Edit by performing the following steps:

In the Menu Editor, select the File node.

Click Create Right.

Relabel the new menu Edit.

8. In a similar fashion to the way you created the File menu items, create two items for the Edit menu labeled Copy and Paste.

9. You can also use the Object Navigator to add a menu item.

Under the Edit_Menu in the Object Navigator, select the Items node and click Create.

10. In the same way as you did with other items, relabel the new item in the Menu Editor with the label Cut, which also renames it in the Object Navigator.

NEW QUESTION: 2

You deploy Azure service by using Azure Resources Manager templates. The template reference secrets are stored in Azure key Vault.

You need to recommend a solution for accessing the secrets during deployments.

The solution must prevent the users who are performing the deployments from accessing the secrets in the key vault directly.

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: An advanced access policy for the key vaults

Enable template deployment

* In the portal, select your Key Vault.

* Select Access policies.

* Select access policies

* Select Click to show advanced access policies.

* Show advanced access policies

* Select Enable access to Azure Resource Manager for template deployment. Then, select Save.
Box 2: Role-based access control (RBAC)

In large teams you may have multiple people deploying resources but don't want to give them access to the actual secrets inside the vault. You can achieve this by creating a custom role that only gives access to the KeyVault for deployment purposes. The deployment user cannot read the secrets within.

NEW QUESTION: 3

Which of the following is NOT an attack against operations?

- A. SYN Denial of Service
- B. Morris Worm
- C. Buffer Overflow
- D. Brute force
- E. Known plain text attack

Answer: E

Explanation:

A known plain text attack is an attack against the organization's cryptosystem, not a direct attack against operations.
