Answer: D

Explanation:

Reference: <http://technet.microsoft.com/en-us/library/ee460960.aspx>

Test-AppLockerPolicy

Tests whether the input files are allowed to run for a given user based on the specified AppLocker policy.

NEW QUESTION: 2

A traffic substitution and insertion attack does which of the following?

- A. Substitutes the traffic with data in a different format but with the same meaning
- B. Substitutes the traffic with data in the same format but with a different meaning
- C. Substitutes the payload with data in the same format but with a different meaning, providing a new payload
- D. Substitutes the payload with data in a different format but with the same meaning, not modifying the payload

Answer: D

NEW QUESTION: 3

An application that you manage has several web front-end instances. Each web front end communicates with a set of back-end worker processes by using an Azure queue. You are developing code for the worker processes. You have a function named DoWork0 that handles d3ta processing tasks.

You need to develop code for the worker processes that meets the following requirements:

- * Property access an item from the queue and be resistant to failure.
- * Run on multiple background processes.
- * Ensure that items are available to other workers two minutes after a worker process fails.
- * Ensure that messages regarding failed processes are logged to the console.

How should you complete the code? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION: 4

A. Option D

B. Option C

C. Option B

D. Option A

Answer: A

Explanation:

*A one-way, outgoing realm trust allows resources in your Windows Server domain (the domain that you are logged on to at the time that you run the New Trust Wizard) to be accessed by users in the Kerberos realm.

*You can establish a realm trust between any non-Windows Kerberos version 5 (V5) realm and an Active Directory domain. This trust relationship allows cross-platform interoperability with security services that are based on other versions of the Kerberos V5 protocol, for example, UNIX and MIT implementations. Realm trusts can switch from nontransitive to transitive and back. Realm trusts can also be either one-way or two-way.

Reference: Create a One-Way, Outgoing, Realm Trust Your network contains an Active Directory domain named contoso.com. The domain contains a file server named Server1 that runs Windows Server 2012 R2. All client computers run Windows 8.
