- A. Option A
- B. Option B
- C. Option D
- D. Option C

Answer: A

Explanation:

As with standard upgrades to Oracle Grid Infrastructure, at any given point in time for normal operation of the cluster, all the nodes in the cluster must have the same software release and patch level. Because one-off patches can be applied as rolling upgrades, all possible patch levels on a particular software release are compatible with each other.

Note: Starting with Oracle Grid Infrastructure 12c Release 1 (12.1), a new cluster state called

"Rolling Patch" is available. This mode is similar to the existing "Rolling Upgrade" mode in terms of the Oracle ASM operations allowed in this quiesce state.

NEW QUESTION: 4

Which of the following would an IS auditor consider a weakness when performing an audit of an organization that uses a public key infrastructure with digital certificates for its business-to-consumer transactions via the internet?

- A. Customers are widely dispersed geographically, but the certificate authorities are not.
- B. The organization is the owner of the certificate authority.
- C. Customers can make their transactions from any computer or mobile device.
- D. The certificate authority has several data processing subcenters to administer certificates.

Answer: B

Explanation:

Explanation/Reference:

Explanation: If the certificate authority belongs to the same organization, this would generate a conflict of interest. That is, if a customer wanted to repudiate a transaction, they could allege that because of the shared interests, an unlawful agreement exists between the parties generating the certificates, if a customer wanted to repudiate a transaction, they could argue that there exists a bribery between the parties to generate the certificates, as shared interests exist. The other options are not weaknesses.
