NEW QUESTION: 1

A network administrator needs to create a QoS policy on an AOS-Switch.

What is one component that the administrator must create before the policy?

- A. a traffic class
- B. an extended IPv4 ACL
- C. an extended MAC ACL
- D. a traffic behavior

Answer: A

NEW QUESTION: 2

What is the first character for file or directory names if they should not be displayed by commands such as ls unless specifically requested?

- A. _ (underscore)
- B. (backslash)
- C. - (minus)
- D. . (dot)

Answer: D

NEW QUESTION: 3

Scenario 2:

After completing the branch activation activities for all required branches, the network administrator attempts to test connectivity between the various branches and between the hubs and branches. The administrator notices a lack of connectivity despite being certain that configurations have been complete. The administrator also observed that several users are reporting intermittent connectivity to some of the applications they are accessing. Other users are reporting no access to these applications. Other users at some of the branches claim they cannot get to certain public resources. The administrator wants to ensure that all sites can talk to each other and all resources are accessible.

Exhibit.

Several reports have come in from branch locations indicating customers cannot reach applications being served by the hub location. The hub location has a single LAN-side port from which it should be learning dynamic routes for the subnets serving the applications. How should the technician verify if the ports on the Edge are up and working?

A. Look in Test&Troubleshoot under the Remote Actions and run System Health.

B. Look under Administration and System Settings to verify if the interfaces are configured and enabled.

C. Look in Test&Troubleshoot under the Remote Diagnostics and run Interface status.

D. Look in Test&Troubleshoot under the Remote Diagnostics and run System Health.

Answer: B

NEW QUESTION: 4

Ace Consulting, a multinational corporate finance consulting firm, is performing an analysis of the East Asian distribution network of Smith, Kleen, and Beetchnutty. Specifically, Ace Consulting is trying to identify the effect of changes in specific variables on the overall efficiency of SKB's distribution process. In their analysis, Ace Consulting identified a "base case" situation using the expected values for each input.

Then, Ace modified each variable a few points above and below the base case, holding other variables constant. This was done in an effort to determine the effect of each variable on the overall efficiency of SKB's distribution process. Which of the following choices correctly describes this stand-alone risk measurement technique?

A. Case study analysis

B. Sensitivity analysis

C. Scenario analysis

D. Regression analysis

E. Relational analysis

F. Monte Carlo simulation

Answer: B

Explanation:

Explanation/Reference:

Explanation:

In this example, Ace consulting has been conducting a sensitivity analysis. This analysis begins with the identification of a "base case" situation using expected values for each input. Then, a variable is manipulated holding the other variables constant, in an effort to determine the sensitivity of the output to manipulations in each variable. Sensitivity analysis is the most widely used technique for measuring stand-alone risk, and can be performed relatively easily using a commercially available spreadsheet package such as Microsoft Excel.
